

STEM Majors

A five-year traditional grant (2012-2018) will provide scholarship support for 40 STEM majors, along with student and faculty support services. Students will be assigned peer, faculty and professional mentors according to their goals and interests. They will take part in a learning community, live together in dedicated residential space and obtain professional internship experiences each summer. The grant \$1,500,000 will assist NCCU in its efforts to increase the number of women and minority students who graduate with a STEM degree and pursue STEM careers.
